

YADHUNATH THARAKESWARAN

+1 (913)-375-3250 ♦ yadhunath2003@gmail.com

Master's student in Computer Science specializing in Data Science and Engineering, with hands-on experience in building data pipelines, training machine learning models, and working with large datasets. Strong foundation in statistical analysis, database systems, and predictive modeling. Skilled in Python, SQL, machine learning frameworks, and modern data engineering tools. Interested in developing scalable data solutions that support analytics, automation, and real-time decision making.

EDUCATION

Masters of Computer Science (Data Science and Engineering) University of Kansas, Lawrence, Kansas	<i>January 2026 - Present</i>
Bachelor of Computer Science & Cybersecurity Certification University of Kansas, Lawrence, Kansas 3.67 GPA	<i>August 2023 - December 2025</i>
Associates Degree in General Science Johnson County Community College, Overland Park, Kansas 3.32 GPA	<i>August 2021 - May 2023</i>

SKILLS AND INTERESTS

Skills	Data Engineering, ETL/ELT Pipelines, Data Analytics, Backend Development, Machine Learning, Cloud Integration, Shell Scripting
Programming	Python, SQL, R, JavaScript, Solidity, Bash
Frameworks	Apache Airflow, Kafka, Django, Node.js, React, Next.js, Hardhat
Platforms	PostgreSQL, MySQL, MongoDB, AWS, Docker, GitHub
Interests	Scalable Data Systems, Data Modeling, Real-Time Processing
Certifications	Google Data Analytics Professional, IBM SQL/ETL/Data Warehousing

EXPERIENCE

KU IT Technician	<i>May 2024 - July 2025</i>
· Resolved 50+ weekly tickets in TDX and ServiceNow by diagnosing hardware, software, and Microsoft 365 issues across KU systems, achieving a 95%+ resolution rate with accurate documentation and minimal escalations.	
Database Editor – Physics and Astrology department	<i>July 2025 - Dec 2025</i>
· Maintained and enhanced FileMaker Pro databases for 100+ graduate students while collaborating with faculty to automate course substitutions, grade tracking, and reporting through custom scripts, reducing manual administrative effort by 30% and improving data accuracy	
Graduate Teaching Assistant - Embedded Systems	<i>Jan 2026 - Present</i>
· Leading lab sections for Embedded Systems course by guiding students through hands-on hardware and software implementations, reinforcing theoretical concepts through practical exercises, debugging support, and real-time instruction to improve technical understanding and lab performance.	

PROJECTS

BlockBadge	<i>Hackathon Project</i>
· Designed and built a tamper-proof digital credentialing system using blockchain technology to verify and authenticate educational and professional achievements. Integrated the XRP Ledger for on-chain credential issuance and Pinata for decentralized IPFS storage, with a React frontend and Node.js backend. Deployed on Vercel and presented as a working prototype at the hackathon.	
Case Study of Cyclistic Database	<i>Google Analytics Certification Project</i>
· Analyzed 800,000+ ride records from sample Cyclistic datasets, cleaning and staging data using Excel and PostgreSQL. Built SQL queries and R visualizations to compare casual riders and members, then created a Tableau dashboard to present insights and support data-driven strategies for increasing subscriber conversion.	
Register Your Rep	<i>Personal Group Project</i>
· Built a full-stack AI-powered fitness web app that generates personalized workout plans and tracks user progress over time. Integrated the Google Gemini API for natural language workout plan generation, with a Next.js and React frontend, MongoDB for persistent user and workout data, and deployed on Vercel for live access.
